OPL INTERNATIONAL SHOES PVT. LTD. · AGRA, UTTAR PRADESH, INDIA

A footwear manufacturer that develops the product first.

OPL International Shoes Pvt. Ltd. manufactures leather and PU footwear for men, women and kids from Agra, India. Design and development run in-house alongside production, so a brand can arrive with a sketch, a reference or a finished tech pack and leave with a sample it can sell.

REGISTERED NAME	OPL International Shoes Pvt. Ltd.

GROUP COMPANIES	OPL International Shoes Pvt. Ltd. · Umbrico India Pvt. Ltd. · Aonair Pvt. Ltd.
OWN LABELS	Mellow Toes · Oplique · Umbrico

How we work

Every programme runs the same route, whether it starts from our collection or from your specification: brief, design, sample, approval, production, quality control, shipment. Nothing scales until the sample is signed off, because the approved pair is the standard the line is measured against.

Design. Develop. Manufacture. Deliver.

Four disciplines under one roof, which is what makes it possible to change a material or a construction without renegotiating the whole project.

01 — Design Concept development and product direction, worked against your market and price point.	02 — Develop Materials, patterns, construction and prototypes, until the pair behaves the way it should.
03 — Manufacture Cutting, stitching, assembly and finishing, to the standard the approved sample sets.	04 — Deliver Quality control, packaging and shipment, documented for the destination market.

Development, stage by stage

You do not need a finished technical package to start. A sketch, a photograph, an existing sample or a full tech pack are all workable starting points.

- | | |
|----|---|
| 01 | Concept — the brief, the market and the price point become a drawn idea. |
| 02 | Material — upper, lining, sole and components selected against the design. |
| 03 | Pattern — last and construction worked out together, not in sequence. |
| 04 | Prototype — the first physical version, built to test shape and fit. |
| 05 | Fit — comfort, volume and sizing reviewed and adjusted. |
| 06 | Sample — a buyer-ready pair, made the way production would make it. |
| 07 | Production — the approved sample becomes the standard the line works to. |

Six core categories.

Each can be produced as shown, adapted to a market, or used as the starting point for something new.

Materials

LEATHER	NUBUCK	SUEDE	TEXTILE	PU	EVA	TPR	RUBBER	COMPONENTS
---------	--------	-------	---------	----	-----	-----	--------	------------

Material is chosen against the construction, the price point and the destination market. Sourcing is arranged per programme.

From idea to finished pair.

01 – Design Concepts drawn in-house and reviewed against market, price point and season.	02 – Material development Leather, suede, textile, PU and components matched to the construction.
03 – Sampling A buyer-ready sample produced, assessed and refined until sign-off.	04 – Cutting Panels cut to the approved pattern; material inspected before it enters the line.
05 – Stitching Uppers closed by trained operators working to the approved sample.	06 – Assembly Uppers lasted and soles attached to the confirmed construction.
07 – Finishing Cleaning, conditioning, lacing and final presentation of the pair.	08 – Quality control Inspection at each stage, and again on the finished pair before packing.
09 – Packaging Cartons, labelling and packing built to the buyer's specification.	10 – Shipment Goods documented, loaded and dispatched to the destination market.

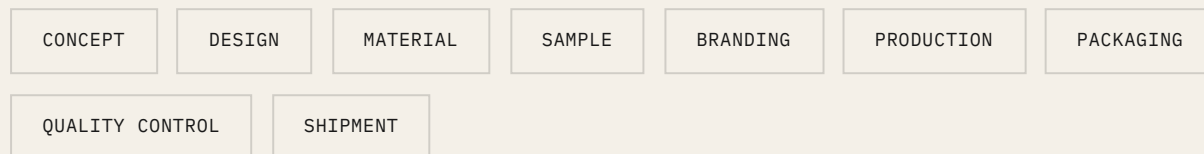

Quality control

Checks sit inside production rather than at the end of it: incoming material inspection, then cutting, stitching, assembly, finishing, final pair inspection and pre-shipment inspection. The reference for every check is the approved sample.

Inspection records can be shared with buyers on request. Where a customer runs their own inspection or appoints a third party, we work to that programme alongside our own. Certifications are published only where the certificate exists and can be verified – tell us which standard matters in your market and we will tell you plainly where we stand on it.

Build your own collection.

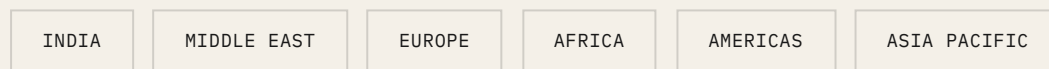

From concept and sampling through to branded production and shipment — a route to your own footwear line without building a factory around it.

Branding covers the product, the packaging and the labelling to your specification. OPL also develops and produces its own labels — Mellow Toes, Oplique and Umbrico — which is where much of the development capability was built.

Made in India. Developed for global markets.

Product is developed with the destination market in view — sizing, construction, packaging and documentation set against where the footwear is going, not adapted afterwards.

Commercial terms

Minimum order quantity, sampling turnaround and production lead time depend on construction, material and colourway. We quote them against a specific product rather than publish a figure that suits everyone — send the product and the quantity you have in mind and we will confirm.

Tell us what you want to make.

Product, market and target quantity are enough to start. If you have a sketch, a reference image, an existing sample or a tech pack, send that too.
